Microcontroller (MCU) Applications Engineering Team

The Microcontroller (MCU) Applications Engineering team provides technical support and training around our industry leading microcontroller and wireless communication devices and solutions. The team interacts with customers, internal sales and support teams, and distributors support teams.

We are looking for candidates who have an interest in microcontrollers, has good communication skills and the interest to work as part of a global team.

This placement will enable you to work within a dynamic application engineering team and improve your technical skills further by developing microcontroller software and hardware projects, incorporating a wide range of technologies such as sensing, AI/ML and wireless. You will also be involved in assisting the team with solution development, system benchmarking, sample code and application note development, and hands-on training workshop development and delivery.

Regular interaction with sales, business development and technical marketing teams will also feature, providing exposure to a very broad range of business activities.
